

# Black Holes in the Cosmic Web: Evolution of AGN, Galaxies, and Large-Scale Structures in the Era of *WFIRST*

**Ryan C. Hickox**  
Dartmouth College  
AAS Splinter Meeting  
10 January 2018

Dartmouth

# Hubble Sized Mirror with a **Survey** Sized Camera

## Hubble Space Telescope

- 14,000+ research publications w/ > 600,000 citations
- 2.5 new published papers per day
- 1000+ scientific proposals per year
- Training of over 1000 grad students and 600 PhD thesis
- Countless scientific breakthroughs

## The Sloan Digital Sky Survey

- 5000+ research publications, w/ > 245,000 citations
- 1000+ astronomer user community
- 14,000 sq deg survey cataloged >1 billion objects
- Created the most detailed map of the Universe to date

# Sloan Digital Sky Survey

Miguel A Aragon (JHU), Mark Subbarao (Adler P.), Alex Szalay (JHU)

Time since the Big Bang: 5.1 billion years

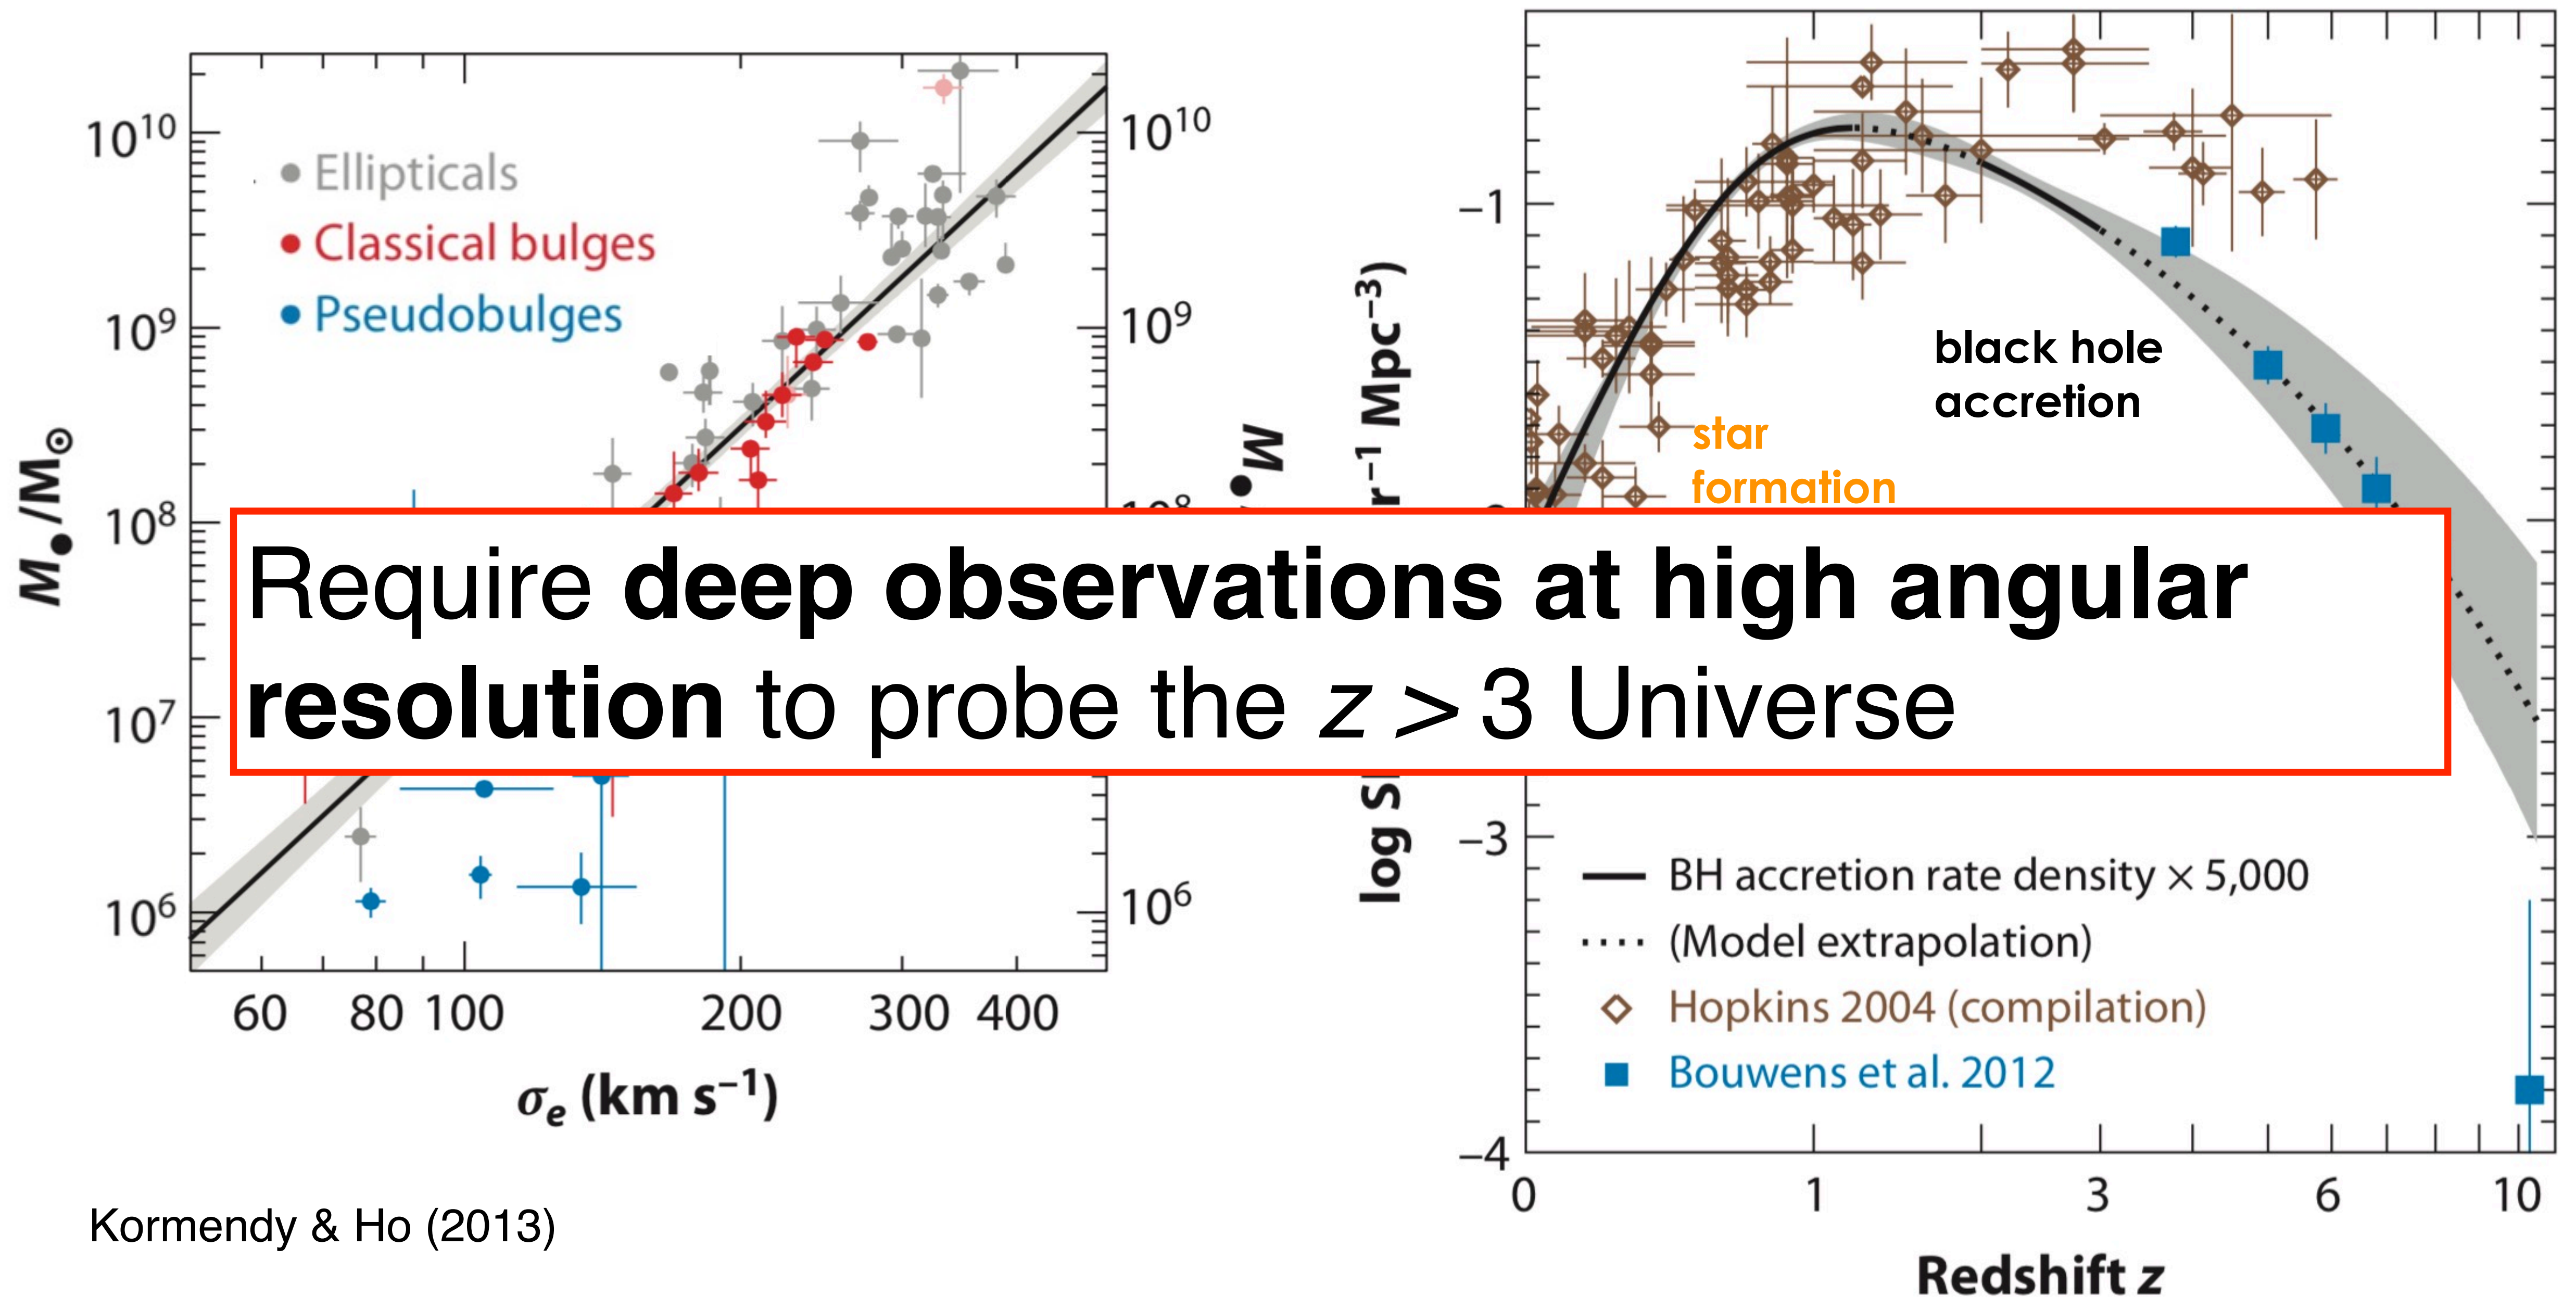

ILLUSTRIS

# Evolution of supermassive black holes

What is the origin of supermassive black holes?

What is their role in the evolution of galaxies and large-scale structures?

Kormendy & Ho (2013)

# AGN are rare!

*Chandra 7 Ms Deep  
Field (Luo et al. 2017)*

*Hubble XDF*

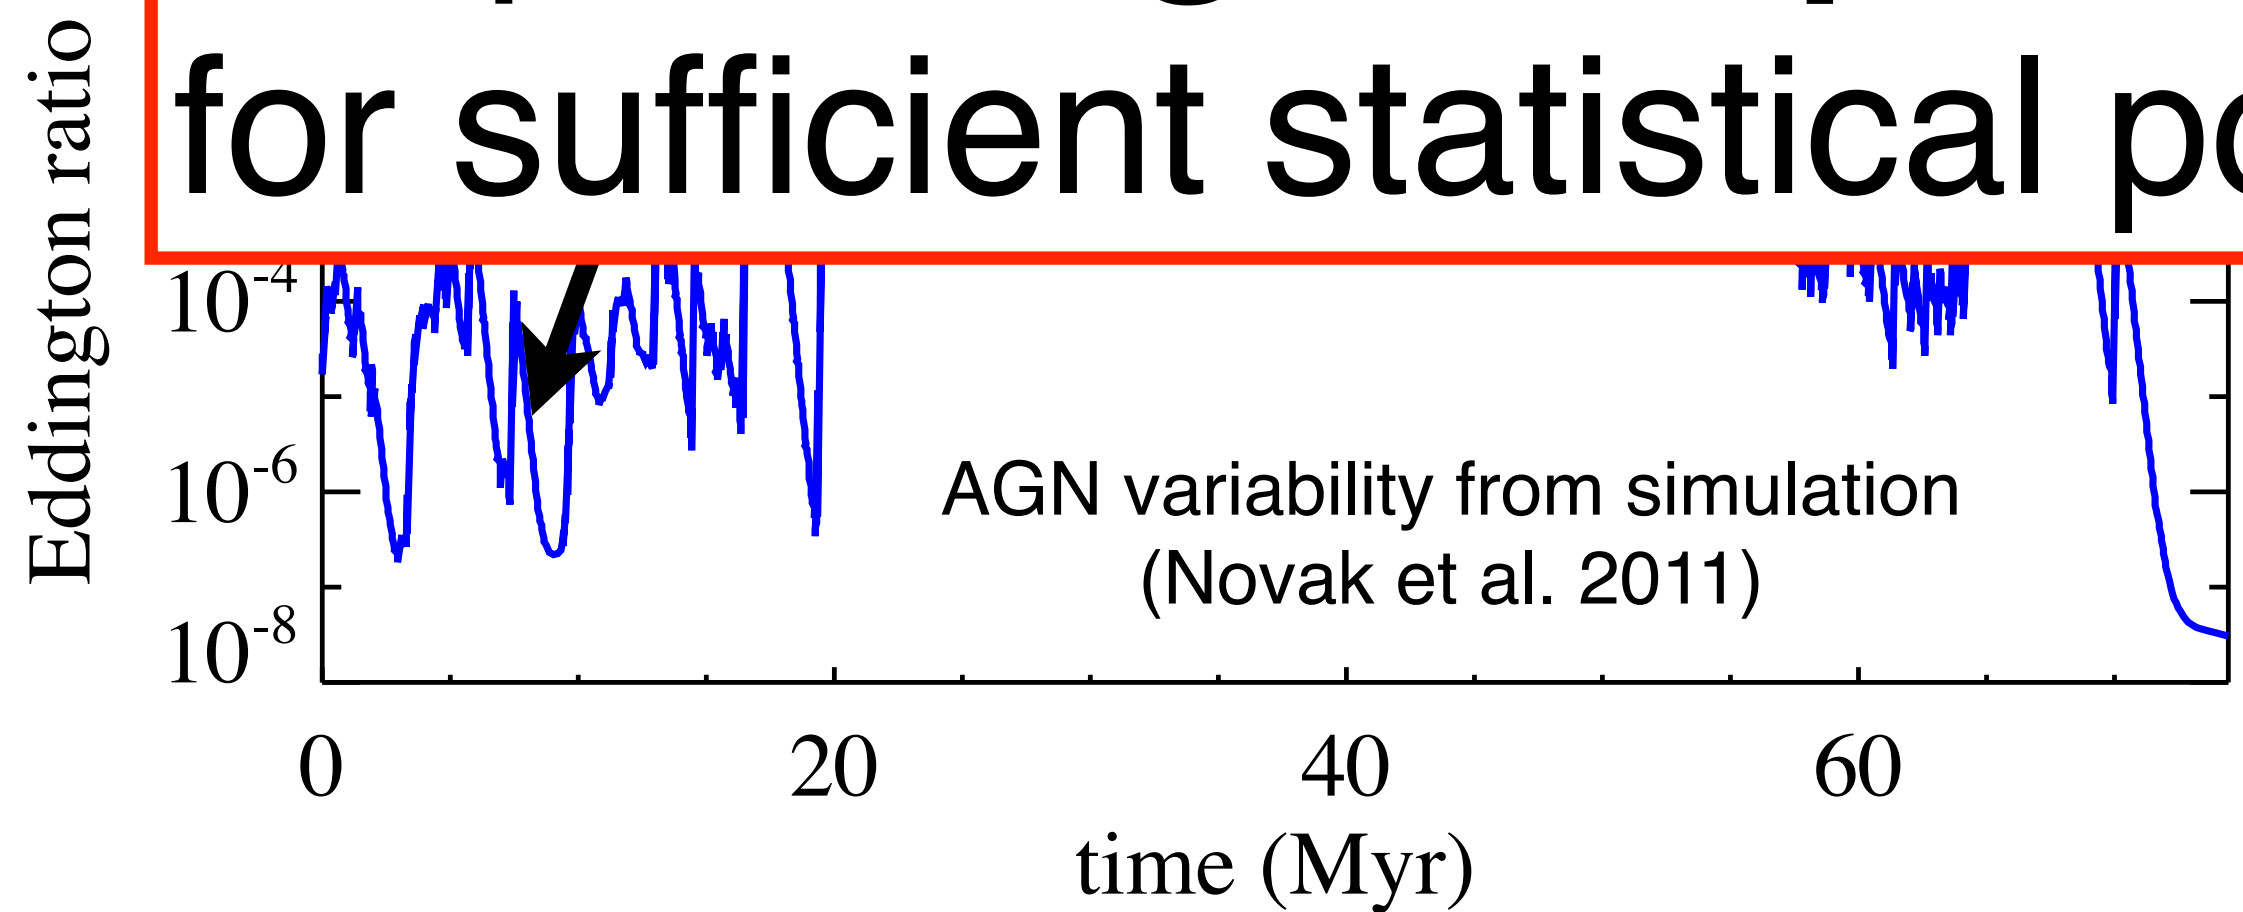

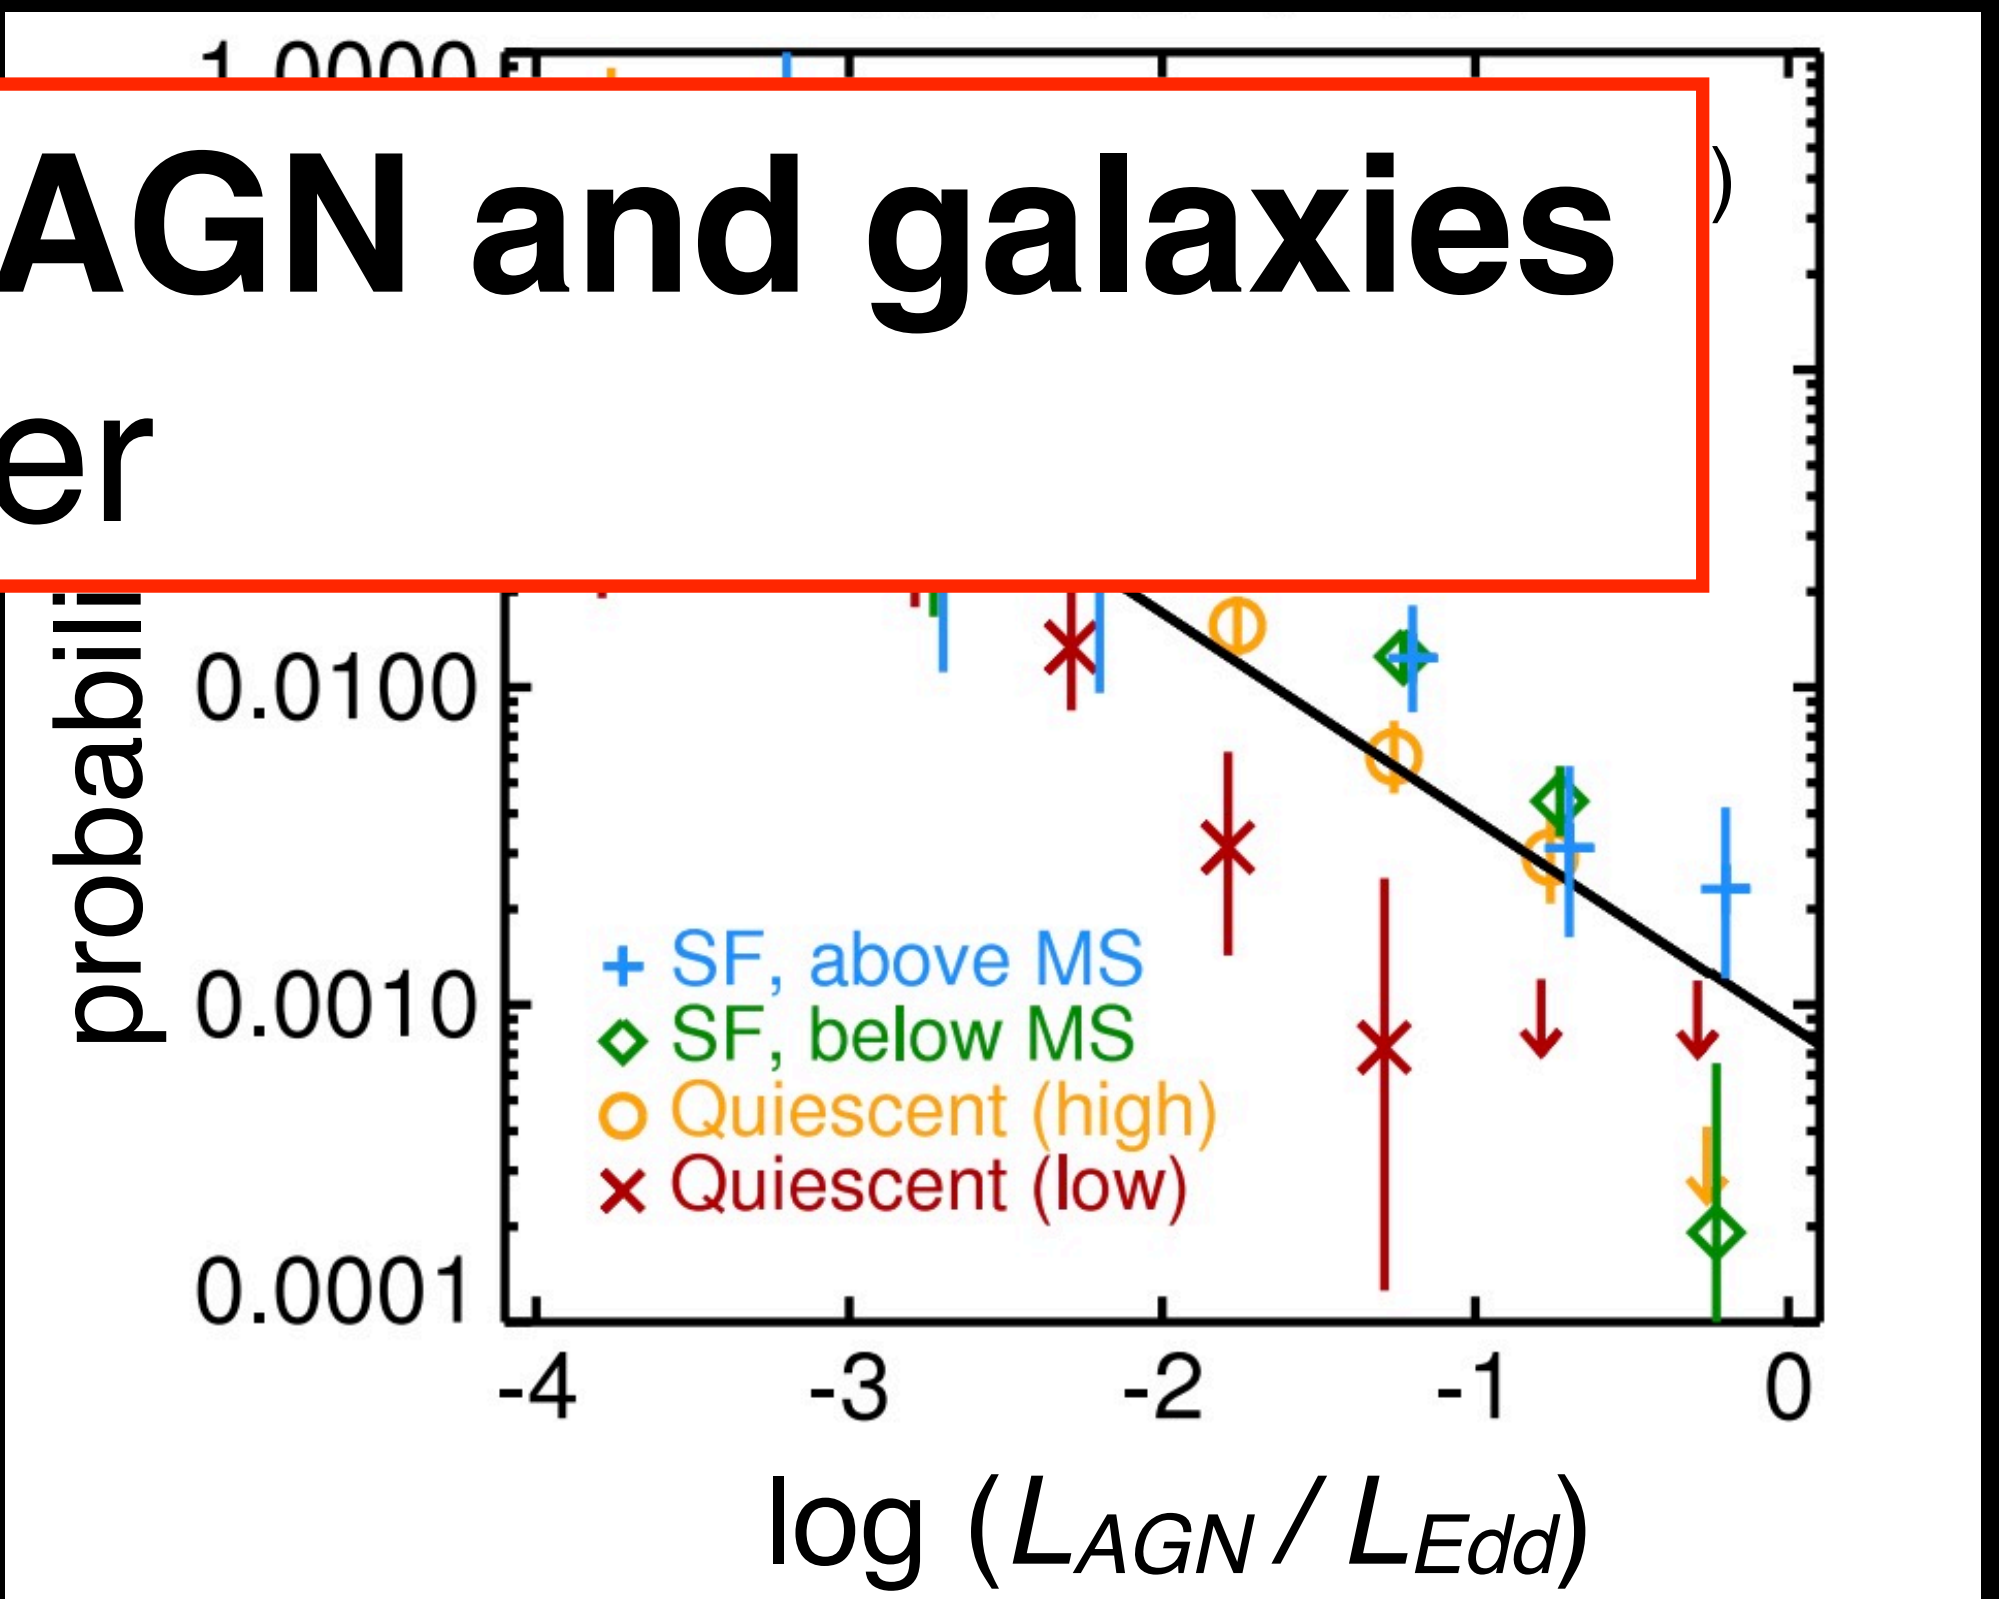

# AGN are stochastic!

Require large samples of AGN and galaxies for sufficient statistical power

Hickox et al. (2014)

# Probing the distant Universe at high resolution

## Hubble Space Telescope

- 14,000+ research publications w/ > 600,000 citations
- 2.5 new published papers per day
- 1000+ scientific proposals per year
- Training of over 1000 grad students and 600 PhD thesis
- Countless scientific breakthroughs

# Studying large samples of objects

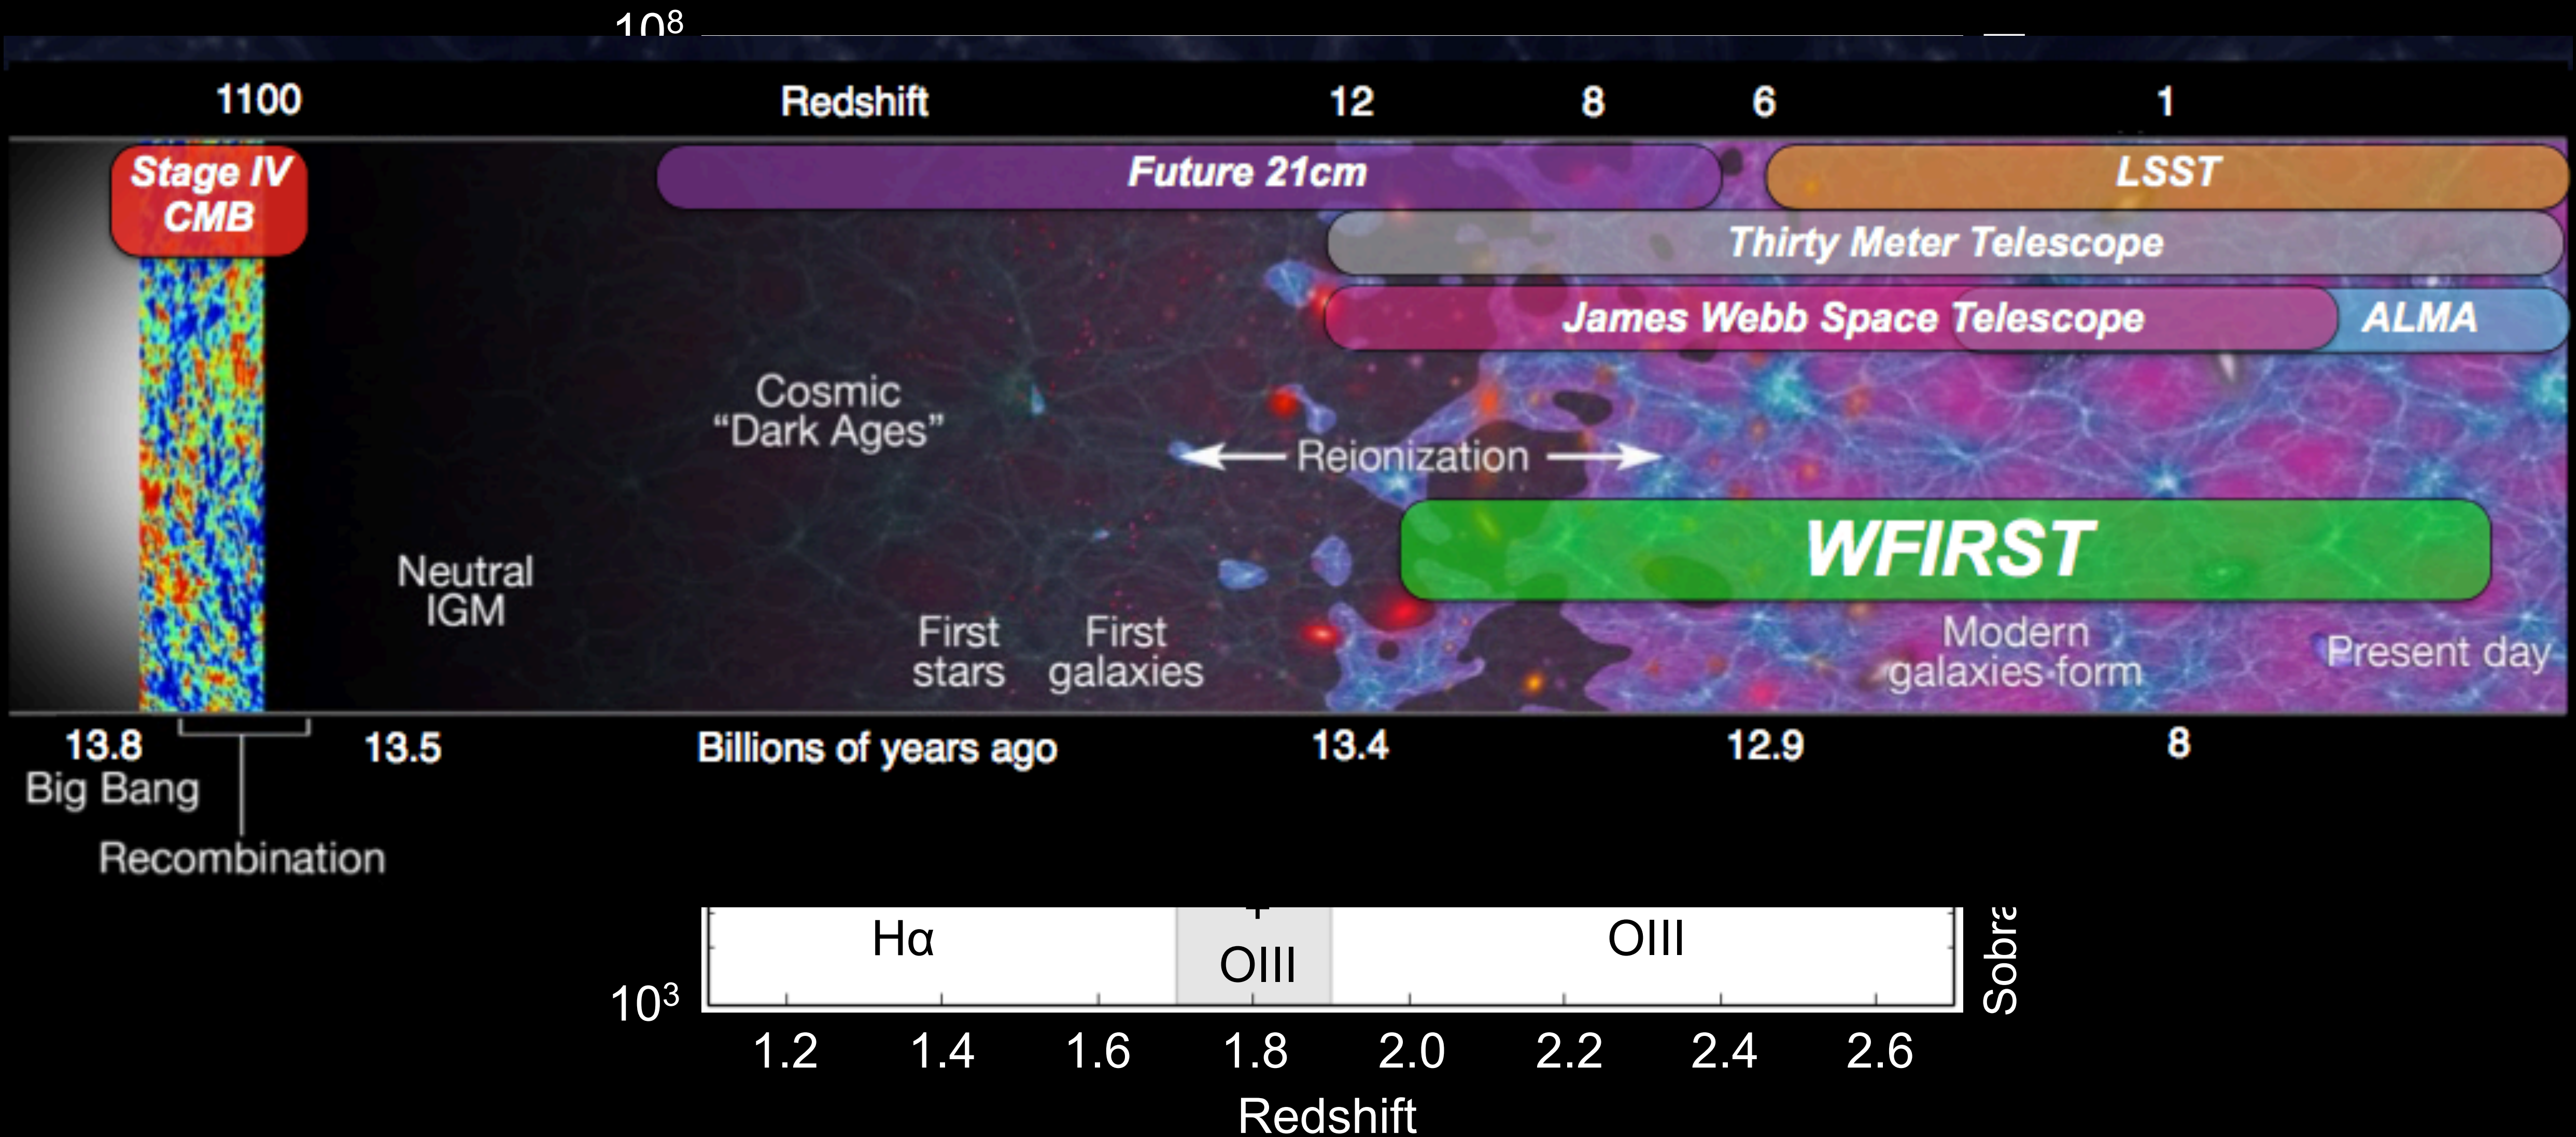

## The Sloan Digital Sky Survey

- 5000+ research publications, w/ > 245,000 citations
- 1000+ astronomer user community
- 14,000 sq deg survey cataloged >1 billion objects
- Created the most detailed map of the Universe to date

# WFIRST

# WFIRST Spectroscopy at the Peak of Cosmic Star Formation

1. Black hole fueling in galaxy mergers
2. Black hole growth and large-scale structures
3. The dawn of black holes

# 1. Black hole fueling in galaxy mergers

0.5 Gyr

Stars

10 kpc

FIRE simulations (courtesy P. Hopkins)

# Are AGN more likely to be found in mergers than “normal” galaxies?

## YES

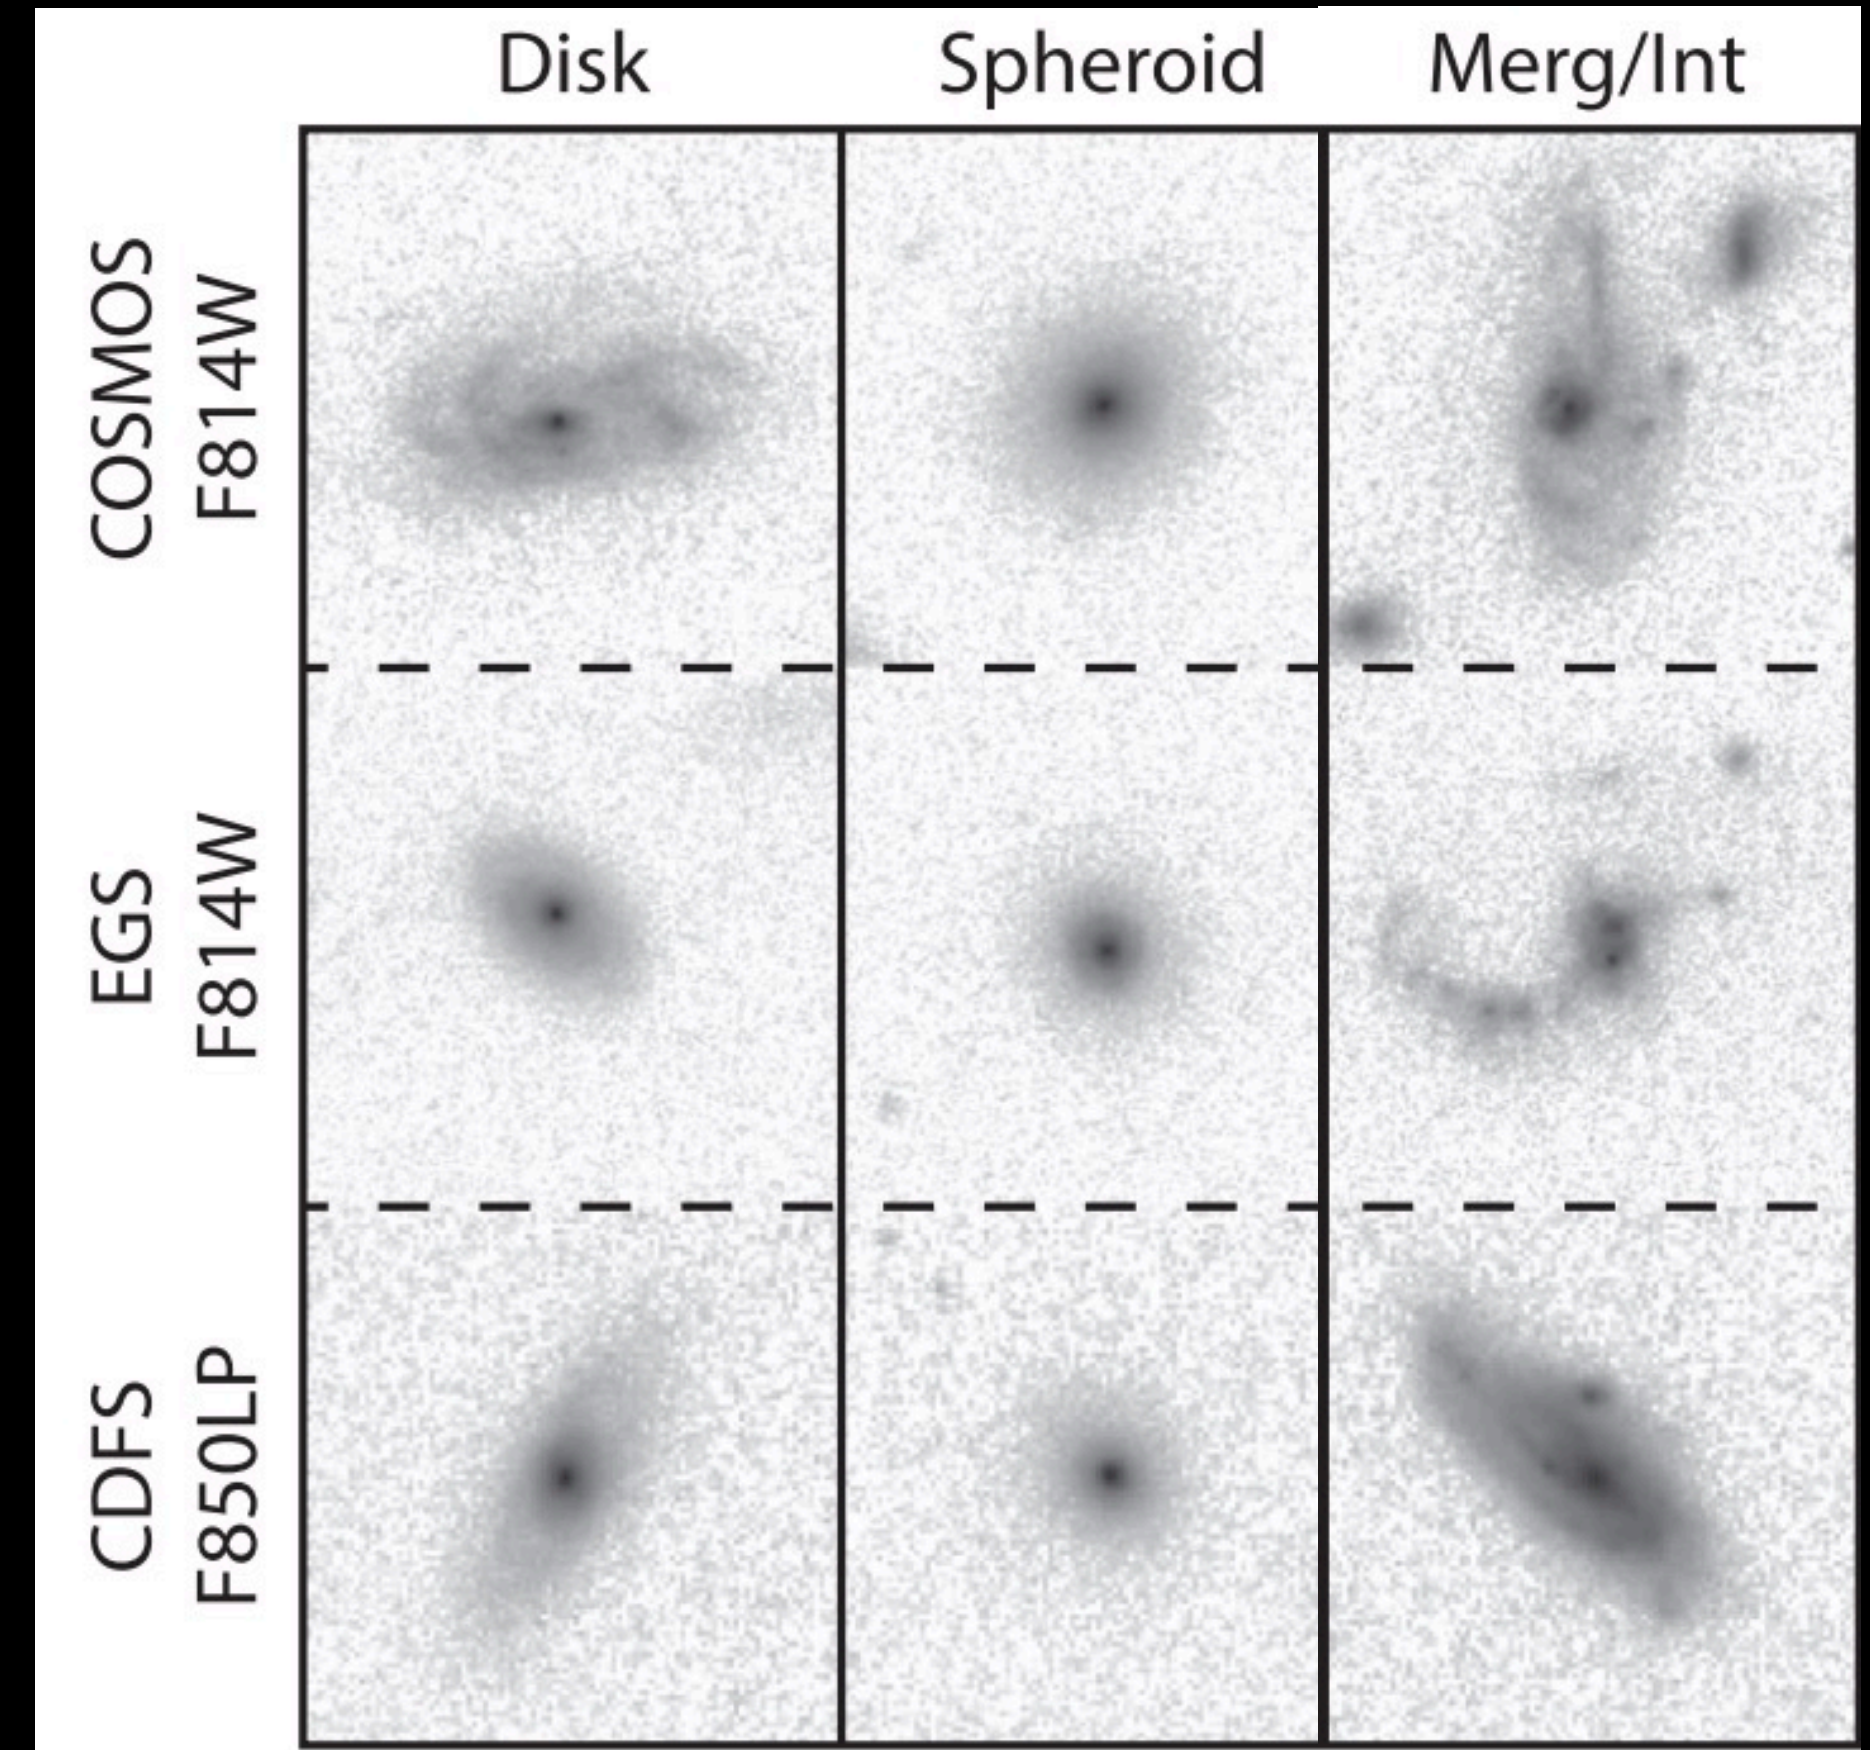

Urrutia et al. (2008)  
Treister et al. (2012)  
Glikman et al. (2015)

## NO

Cisternas et al. (2010)  
Schawinski et al.  
Kocevski et al. (2012)  
Villforth et al. (2014, 2017)

## IF OBSCURED

Kocevski et al. (2015)  
Ricci et al. (2017)

Kocevski et al. (2015)

Are **all** mergers more likely to host AGN than **all** “normal galaxies”

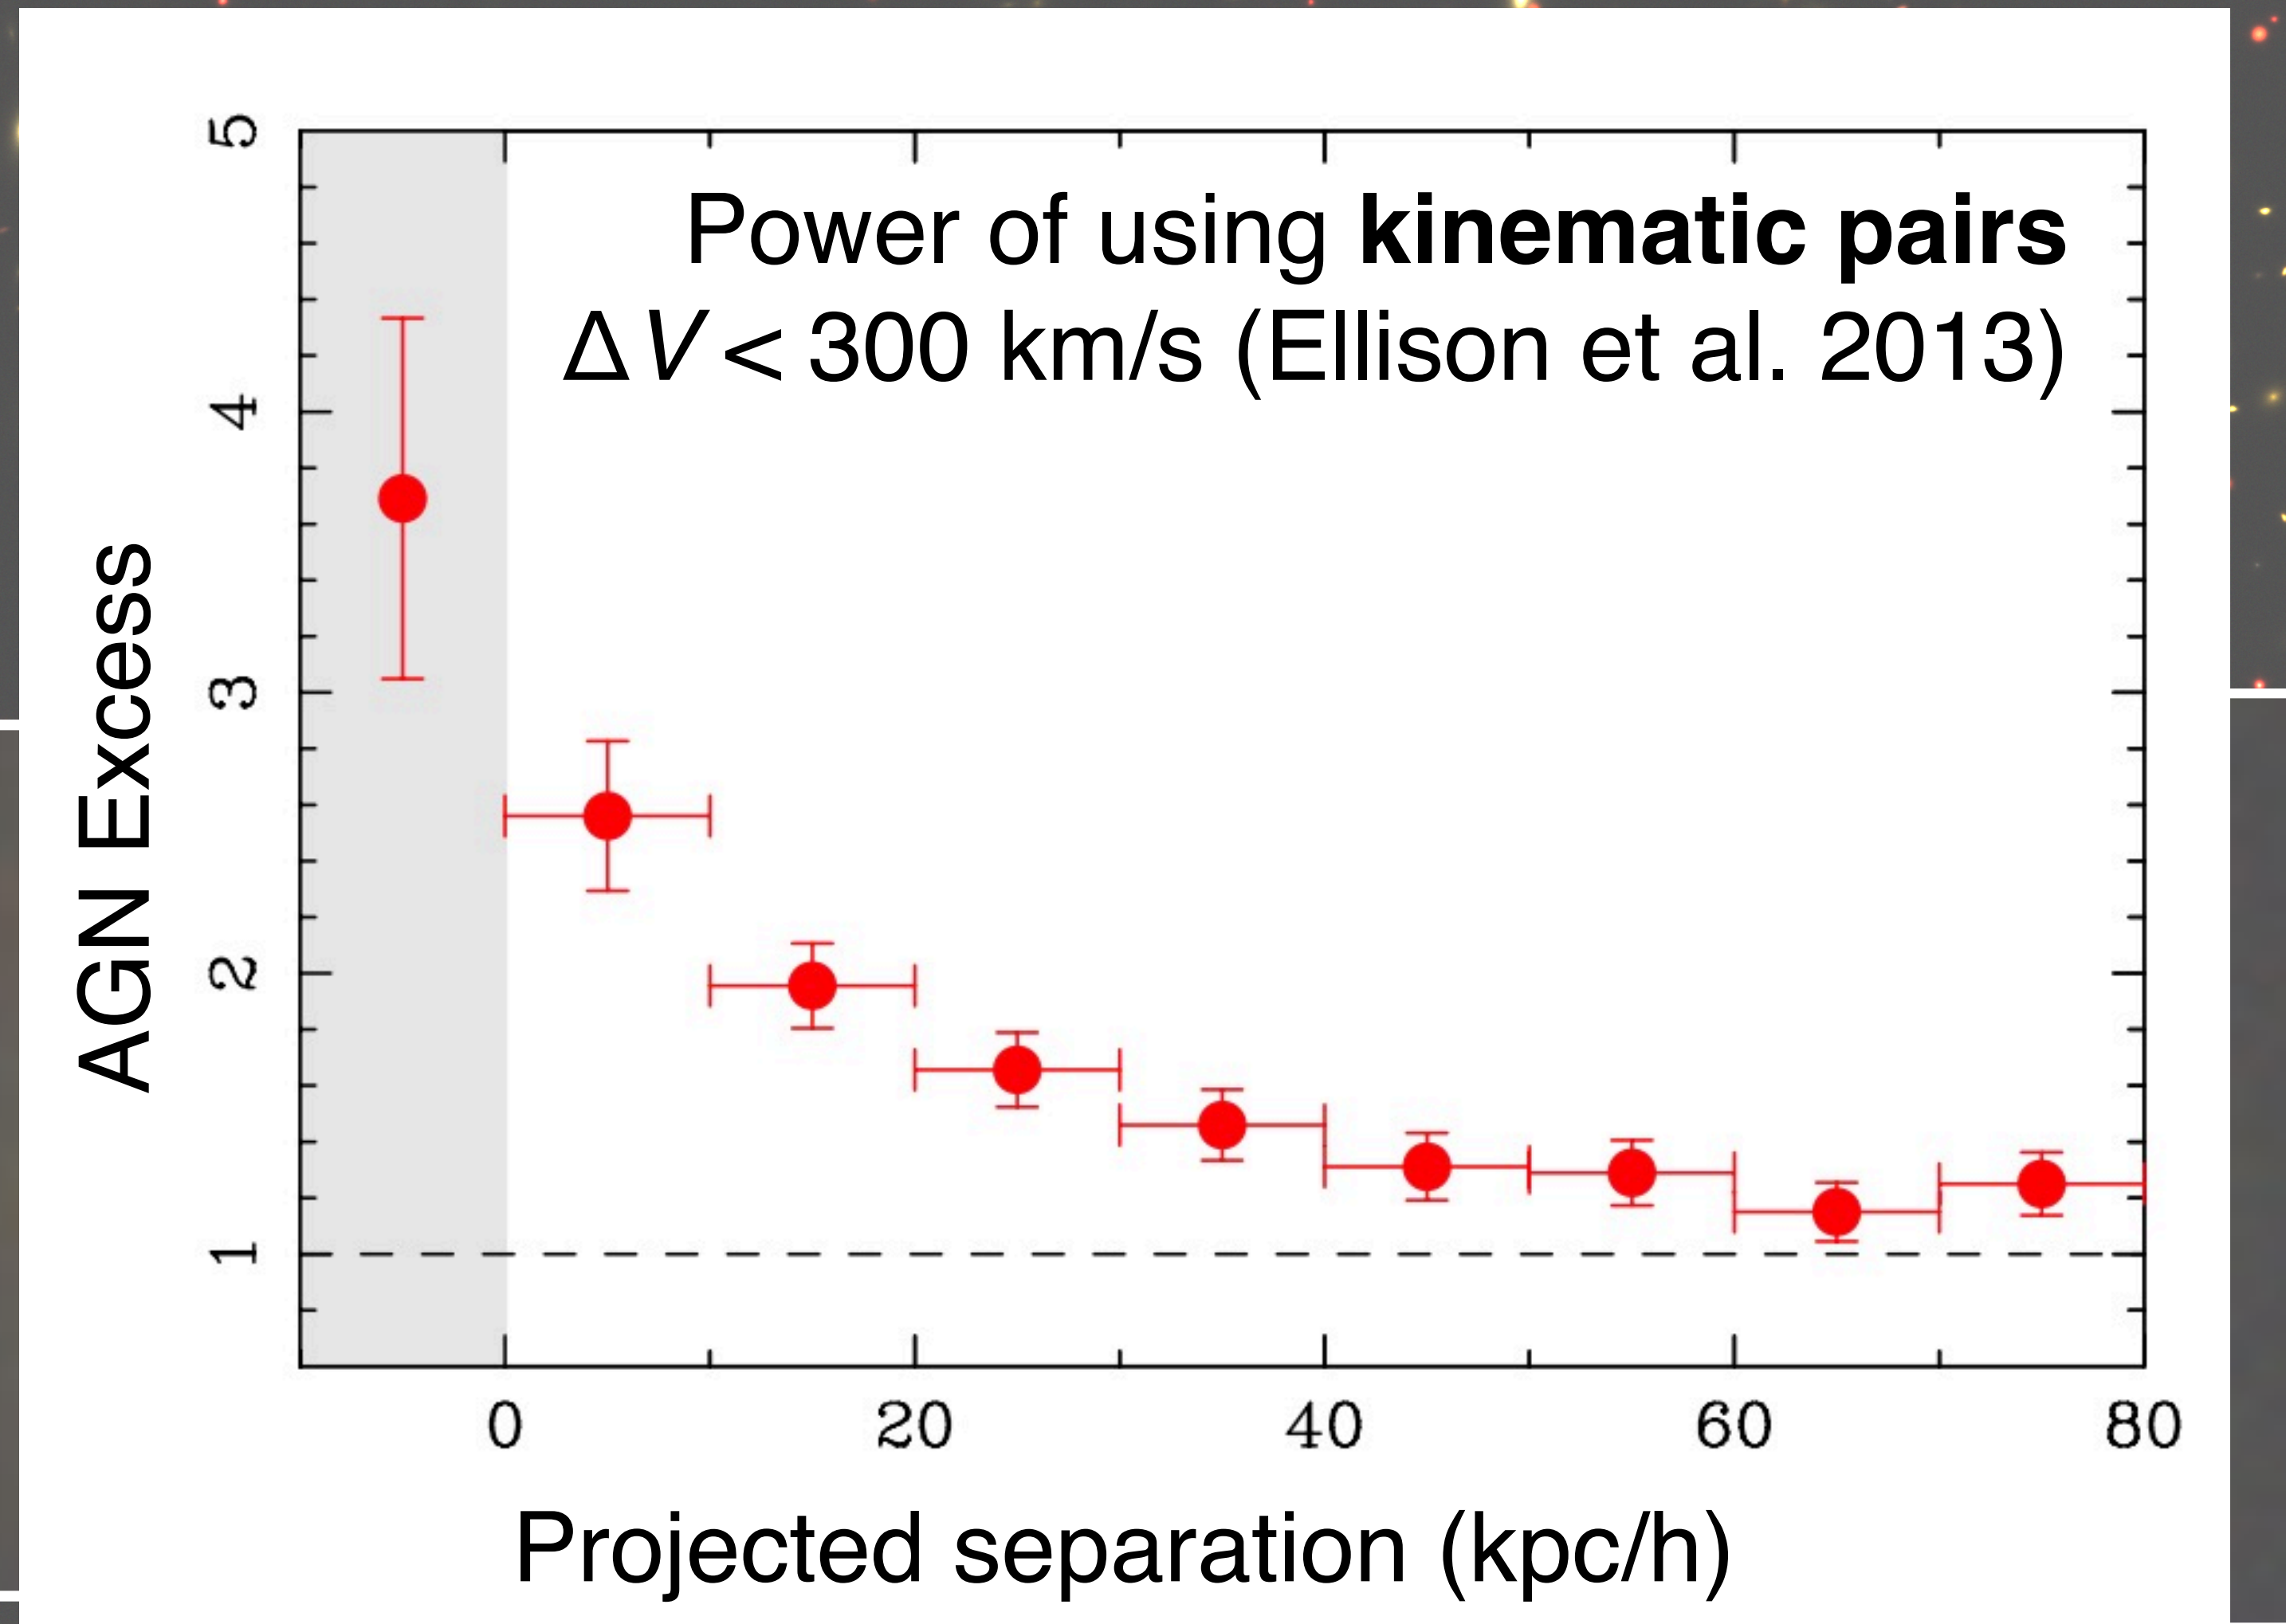

SDSS (Elison et al. 2011, 2013;  
Weston et al. 2017)  $z < 0.1$

**YES**

Subaru Hyper-Suprime Cam  
(Goulding et al. 2017)  $z < 0.9$

See discussion in Hickox et al. (2014)

## 2. Black hole growth and large-scale structures

Time since the Big Bang: 5.1 billion years

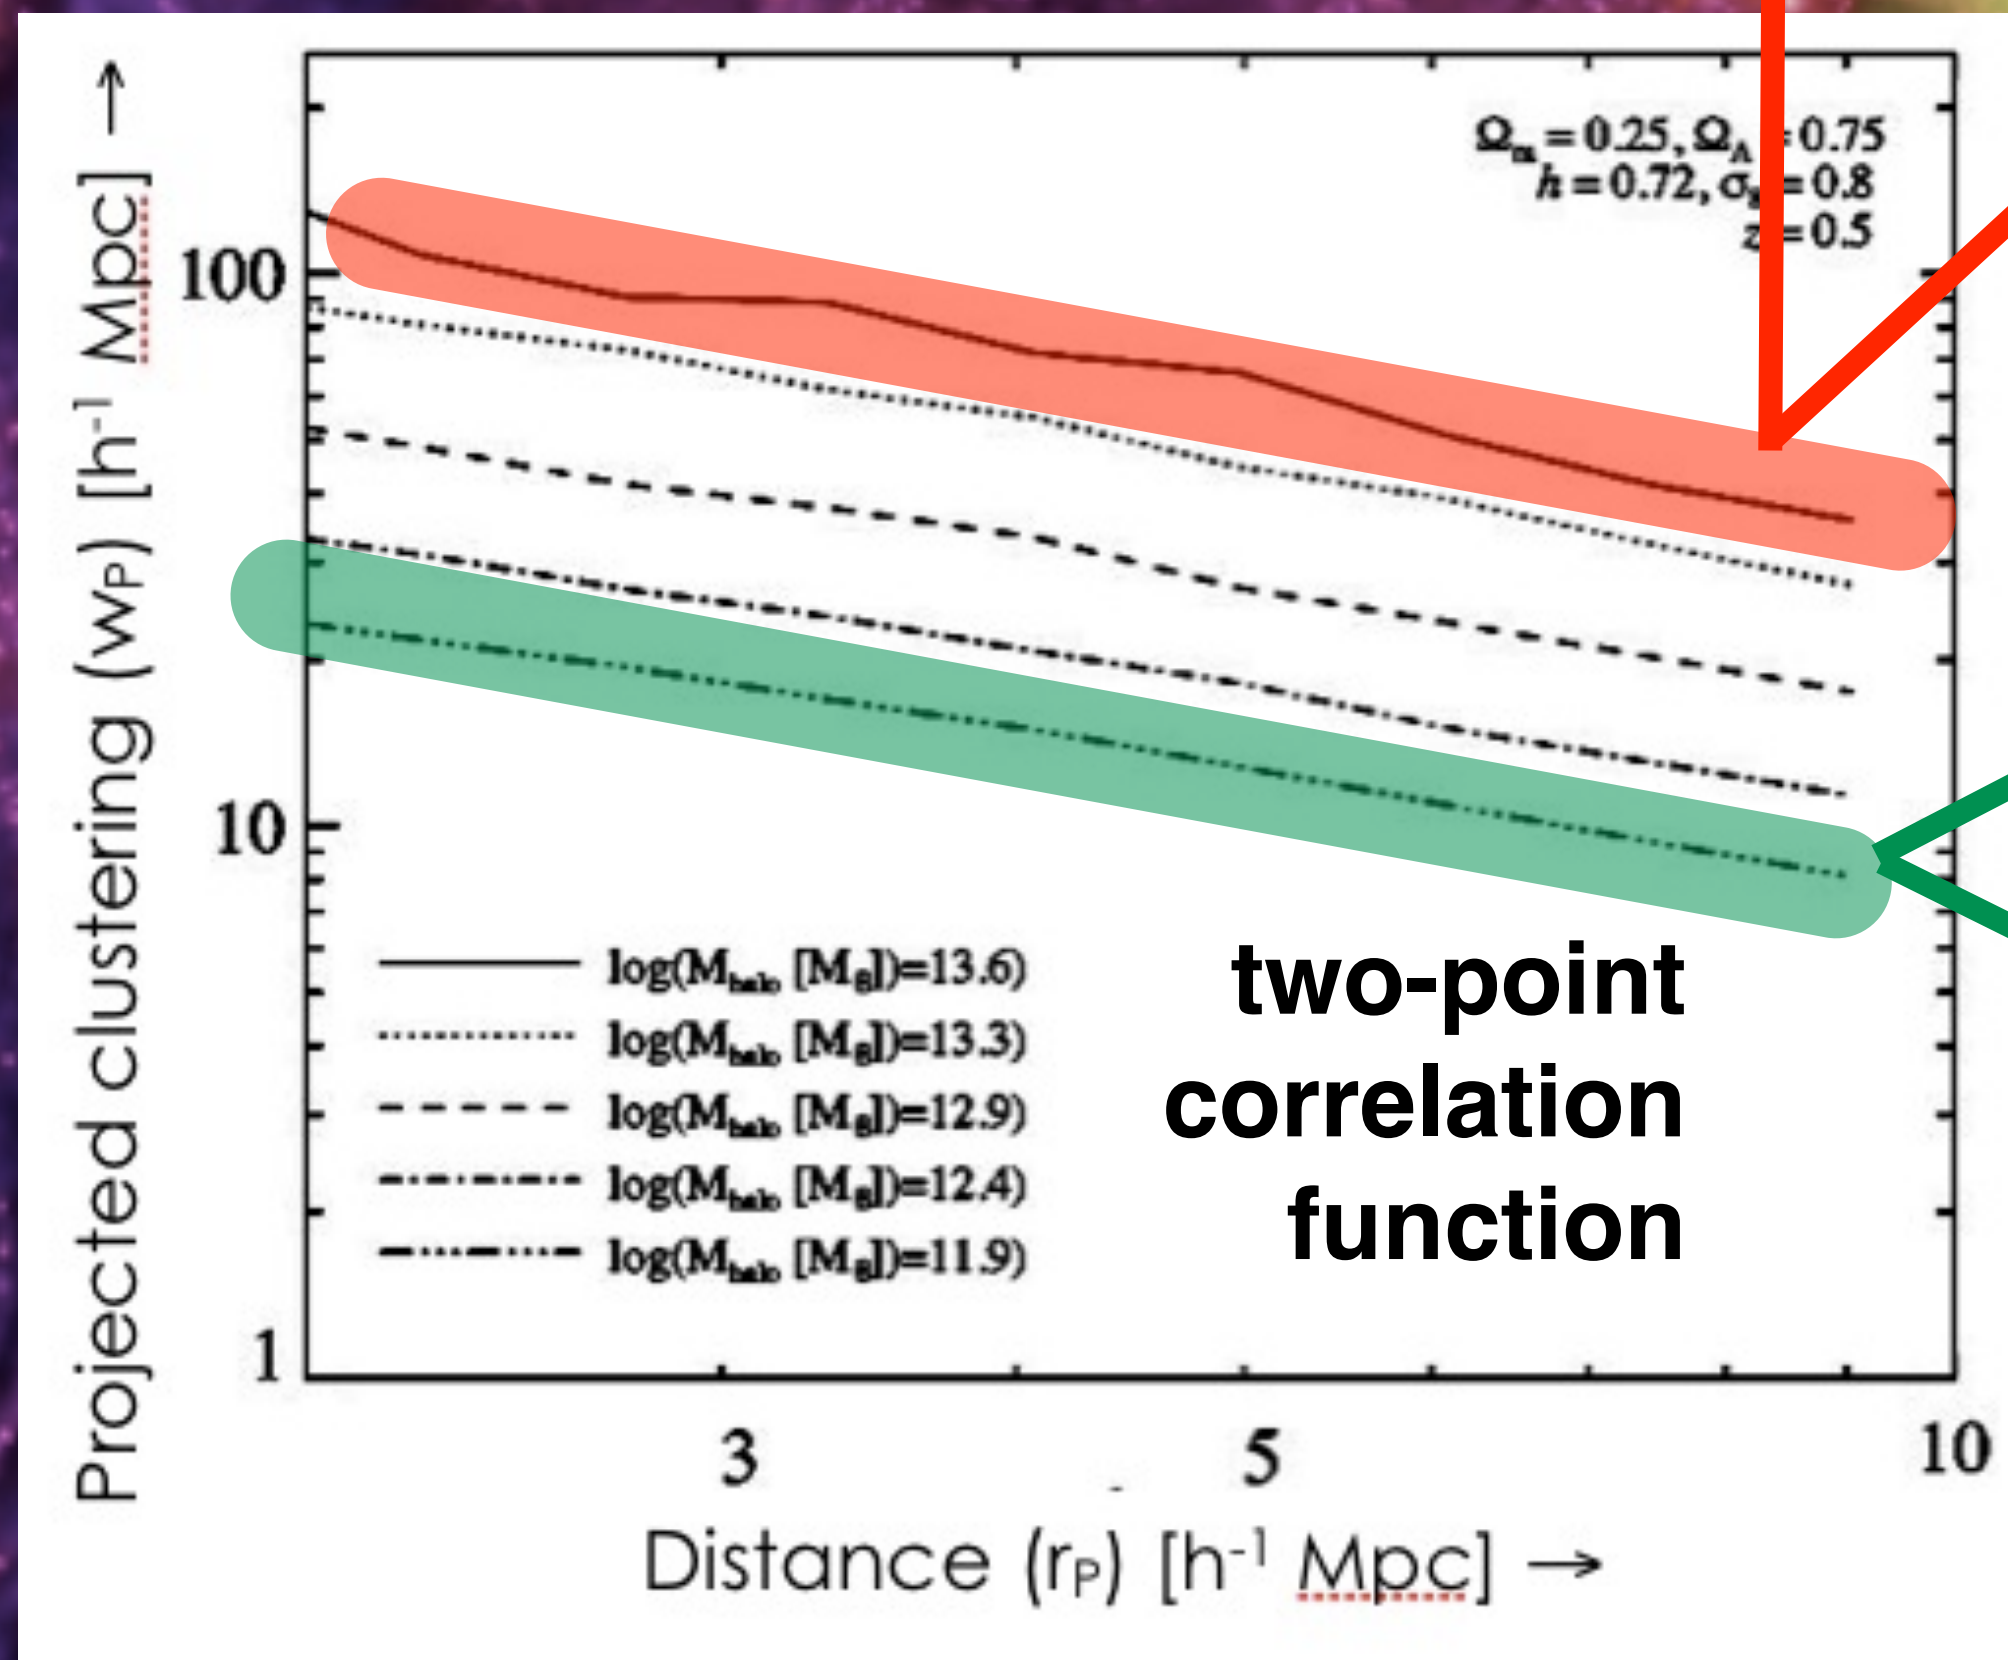

ILLUSTRIS

- galaxies
- X-ray AGN

# Clustering tells us dark matter halo mass

31.25 Mpc/h

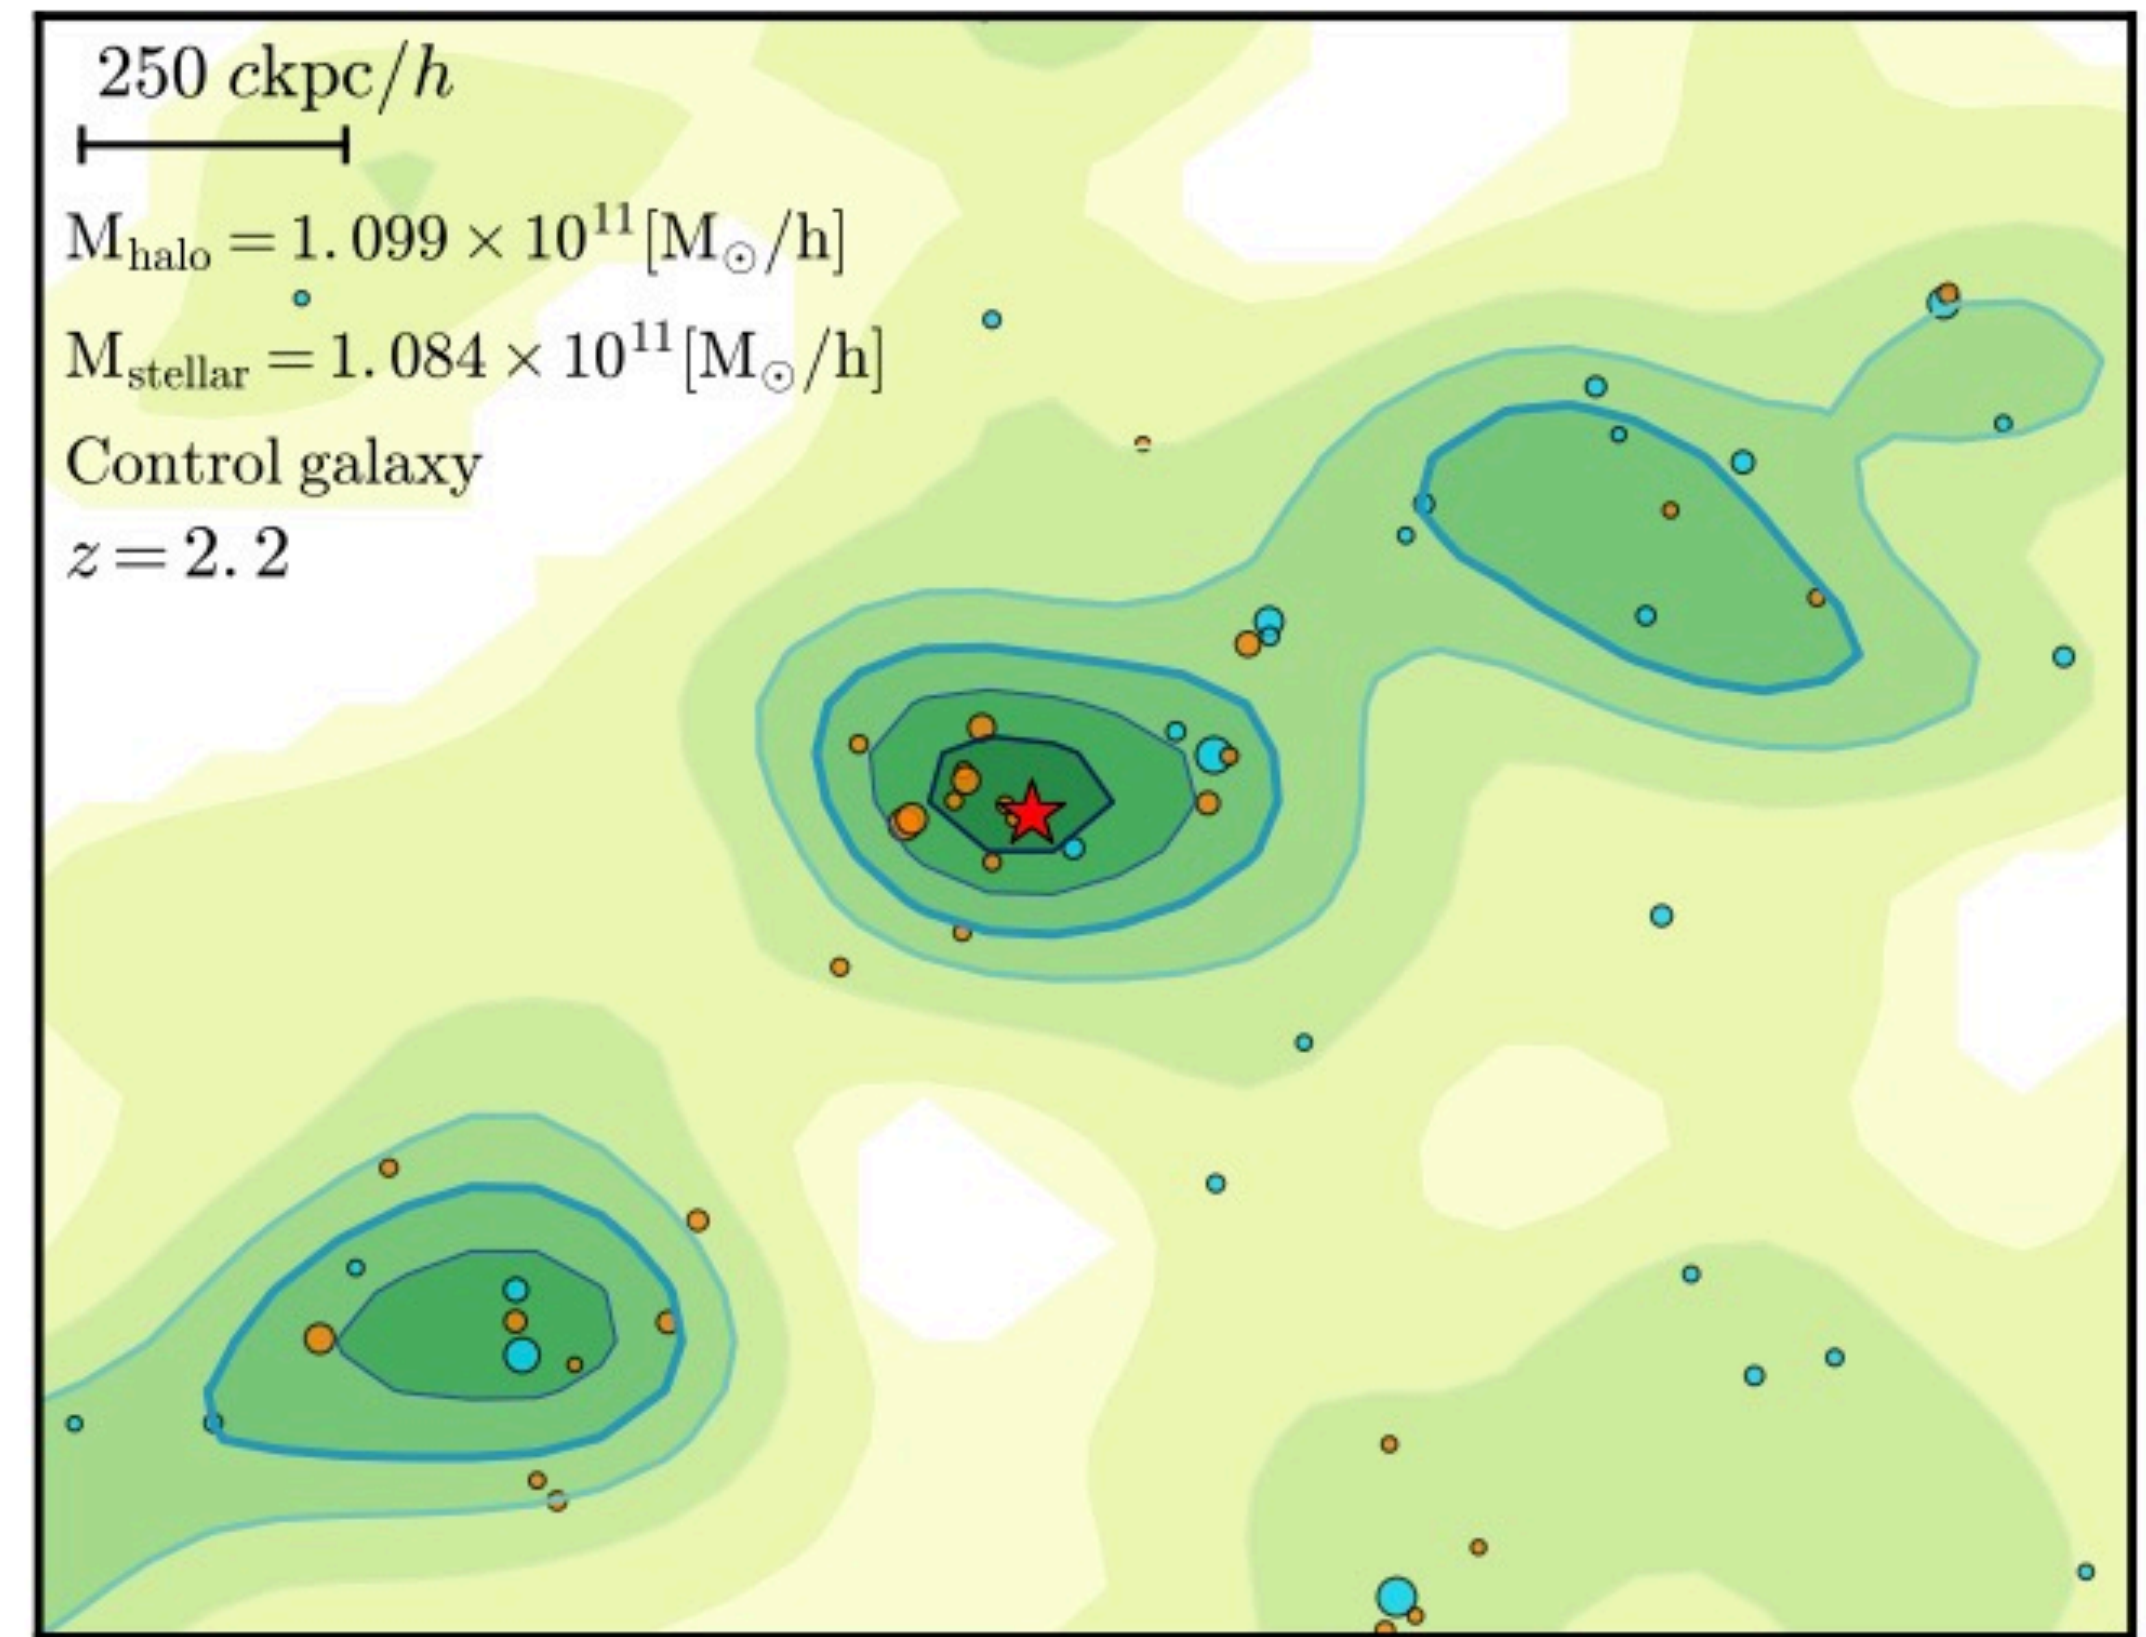

# The What happens at higher $z$ ?

(Hickox)

AGN clustering and environment provides an important constraint on black hole feedback models (e.g., Izquierdo-Villalba 2017)

fermi  
m  
ra  
gr  
m

Redshift

Alexander & Hickox (2012)

Also, **weak lensing** can provide a valuable independent constraint on AGN halo masses (e.g. Mandelbaum et al. 2009; DiPompeo et al. 2017)

### 3. The dawn of black holes

Smith, Bromm & Loeb (2017)

$z=90.0$

Hirano et al. (2017)

The earliest supermassive black holes, more than 1 billion times more massive than the Sun, are observed when the Universe is less than a billion years old. **How did these black holes form?** There are many potential pathways.

LYNX

*The Dawn of Black Holes*

*The Invisible Drivers of  
Galaxy and Structure  
Formation*

*The Energetic Side of Stellar  
Evolution and Stellar  
Ecosystems*

Simulated deep *Lynx* HDXI image

**X-ray observations** with *Lynx* can find the **earliest growing black holes**, at redshift up to 10 or higher, covering up to a **full square degree**.

**Infrared observations** with *WFIRST* will be critical for associating high redshift

Simulated WFIRST deep field (illustris; Snyder et al. (2017))

To understand the co-evolution of black holes and galaxies we need to:

Probe the distant Universe at high resolution

Study large samples of objects
